DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-37, drawn to a pixel cell for an image sensor, classified in class 257, subclass 290.
- II. Claims 38-54, drawn to a method of forming a pixel cell for an image sensor, classified in class 438, subclass 48.

The inventions are distinct, each from the other because of the following reasons:

Inventions II and I are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the group I invention could be made by a material different process. For example, forming a photodiode on the temporary interposer, forming a gate of a transistor adjacent to the photodiode, and forming a substrate to a photodiode and a gate, and then removing the temporary interposer, instead of forming a photodiode on a substrate and forming a gate adjacent to the photodiode.

Because these inventions are distinct for the reasons give above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
